## PYROLOX

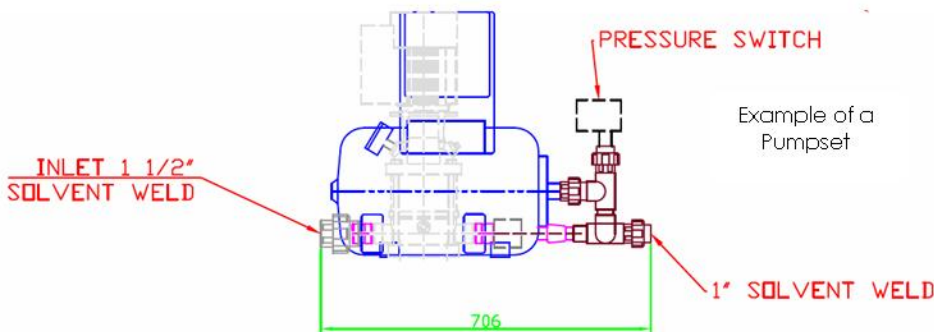

Pyrolox media is an alternative to Filox and we will be offering this as an option in our Iron & Manganese removal systems. Like Filox and unlike cheaper medias Pyrolox is based on solid Manganese Dioxide. The cost saving of Pyrolox over Filox is more than 40%.

## Side port vessels

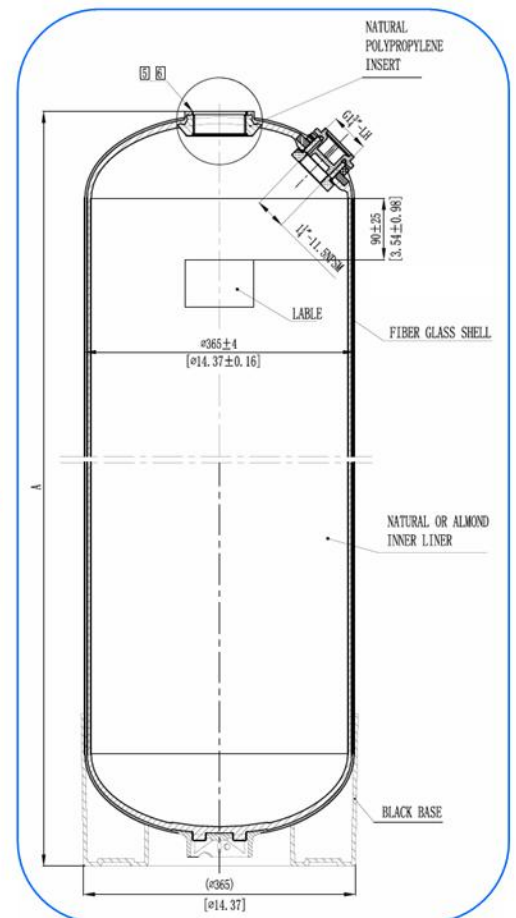

Side port vessels are particularly useful for filters where the media needs to be topped up on a regular basis. A good example of this would be pHlocrite B media which is used for pH correction. We are stocking a range of sideport vessels in the following sizes: 1054, 1248, 1354, 1465. Please call us for pricing details or if you would like this as an option on your pHlocrite B

## Pump sets

We can supply pumpsets for a wide range of flow rates and pressures. These consist of a Grundfos pump and pressure vessel with a pressure switch and associated ABS pipework.

Example of a Pumpset

Flow rate	Pressure	Price
1m <sup>3</sup> /hr	3 bar	£967
3m <sup>3</sup> /hr	3 bar	£1048
5m <sup>3</sup> /hr	3 bar	£1303
10m <sup>3</sup> /hr	3 bar	£1890

## Who are Euraqua?

Why?

Who?

Where?

When?

Who are Euraqua? Well, the company was started 27 years ago by 3 entrepreneurs, Andy, Gerry and Rob who remain the main owners, although many of the staff have bought shares in the company too. We therefore don't belong to any group and are totally independent. At our premises in Hitchin, Hertfordshire, we employ 15 people spread across production and office staff. Together we design and assemble a wide range of water treatment products. Our aim is to give the best service we possibly can to customers such as yourselves. We're particularly interested in building custom made, bespoke pieces of engineered plant, tailor made to your requirements, such as reverse osmosis and ultra filtration.

### Reverse Osmosis Systems

Combined RO / softener

Double pass RO

#### Why buy a reverse osmosis system from Euraqua?

We build and test every individual RO system here.

As a result we have an in-depth knowledge of each piece of plant that leaves our own factory.

We record all of the test data so that we can refer to it if there are problems at your customer's site.

Because we build all our RO's individually ourselves we have an extensive range of replacement parts in stock.

This also means that we can design an RO specifically for your requirements based upon a water analysis and / or space limitations.

We welcome you here, when we've finished building it to observe your completed RO being tested and for basic training, if required.

#### Deliveries

Please ensure that all deliveries are checked for damage before signing otherwise we can't claim from the delivery company.

#### Customer training

We shall be offering training at your offices soon, please check web site for details.

#### Spring sale!

Check our website over the spring period as we will be offering discounts on some of our products.
